

Challenge Cases #1

Christopher J. VandenBussche MD PhD
Associate Professor of Pathology
The Johns Hopkins University School of Medicine

Assessment?

Assessment?

Malignant epithelial cells

Glandular features

Prominent nucleoli seen

Clean background

Diagnosis: Carcinoma with glandular features. See note.

Note: An extrauterine primary site cannot be excluded.

Follow up diagnosis:

Endometrioid ovarian carcinoma

Assessment?

Assessment?

Malignant spindle cells

Leiomyosarcoma

Endometrial Stromal Sarcoma

Sarcomatoid SqCCa

Spindle Cell Melanoma

MMMT

Clinging diathesis

Diagnosis: Malignant spindle cell neoplasm

Follow up diagnosis:
Leiomyosarcoma

Histiocytes in Pap Test

Table I. Characteristics of Cases of Endometrial Pathology (i.e., Carcinomas and Hyperplasias) and Their Controls

<i>Variable</i>	<i>Categories</i>	<i>Cases</i>		<i>Controls</i>
		<i>Carcinomas</i>	<i>Hyperplasias</i>	
Age (yr)	40–55	12 (27.9%)	30 (50.8%)	47 (46.5%)
	56–69	20 (46.5%)	20 (33.9%)	48 (47.5%)
	>69	11 (25.6%)	9 (15.3%)	6 (5.9%)
Mean age		62.9	57.3	56.5
Free histiocytes	Present	12 (27.9%)	8 (13.6%)	12 (11.9%)
Histiocytes with PIC	Present	19 (44.2%)	5 (8.5%)	17 (16.8%)
	Absent	12 (27.9%)	46 (77.9%)	72 (71.3%)
Normal	Present	4 (9.3%)	8 (13.6%)	5 (5.0%)
Endometrial cells	Absent	39 (90.7%)	51 (86.4%)	96 (95.0%)

Histiocytes in Pap Smear

Table II. Logistic Regression Analysis of Cytopathological Attributes and Risk of Endometrial Carcinoma and Endometrial Hyperplasia

<i>Variable</i>	<i>Odds ratio^a and 95% confidence interval</i>		
	<i>Crude</i>	<i>Age-adjusted</i>	<i>Multivariate^b</i>
Endometrial pathology			
Free histiocytes	1.81 (0.83–3.93)	1.58 (0.71–3.50)	1.23 (0.50–3.00)
Histiocytes with PIC	1.52 (0.76–3.04)	1.33 (0.65–2.71)	1.10 (0.50–2.48)
Normal endometrial cells	2.56 (0.87–7.56)	3.11 (1.03–9.40)	2.84 (0.90–8.72)
Endometrial carcinoma			
Free histiocytes	2.87 (1.17–7.05)	2.03 (0.77–5.38)	1.02 (0.32–3.22)
Histiocytes with PIC	3.91 (1.76–8.67)	3.19 (1.37–7.43)	3.00 (1.16–7.70)
Normal endometrial cells	1.97 (0.50–7.72)	2.80 (0.64–12.21)	2.19 (0.43–11.08)
Endometrial hyperplasia			
Free histiocytes	1.16 (0.45–3.03)	1.11 (0.42–2.95)	1.10 (0.37–3.30)
Histiocytes with PIC	0.46 (0.16–1.31)	0.44 (0.15–1.27)	0.33 (0.10–1.06)
Normal endometrial cells	3.01 (0.94–9.68)	3.23 (0.99–10.53)	4.09 (1.14–14.67)

Histiocytes in Pap Smear

Table II *PPV for Women with Histiocytes Only and with Additional Clinical and/or Pap Smear Findings*

Patients with:	Uterine pathology (%)	Endometrial pathology (%)	Endometrial malignancy (%)
Additional clinical and/or Pap smear findings	60	36.7	20
Histiocytes only	5.5	2.9	1.3

Uterine pathology = all primary and metastatic uterine malignancies, endometrial hyperplasias, endometrial and endocervical polyps, submucosal leiomyomata and tamoxifen-related endocervical glandular atypia; endometrial pathology = all endometrial primary malignancies, endometrial hyperplasias and endometrial polyps; endometrial malignancy = all primary endometrial carcinomas and malignant mixed müllerian tumors.

Assessment?

HSIL vs. AIS

Adenocarcinoma in situ (AIS)

Table 2. Comparison of False-Negative Rates, Percentages of Reviews Concordant With Exact Interpretation, and Percentages of Slides With All Reviews Concordant With the Exact Interpretation*†

Reference Interpretation	A—False-Negative Rate/ Total Reviews (%)	B—Reviews With Exact Interpretation/ Total Reviews (%)		C—Slides With Exact Interpretation in All Reviews/Total Reviews (%)‡	
		226 Included	226 Excluded	226 Included	226 Excluded
AIS	25/213 (11.7)	99/213 (46.5)	99/213 (46.5)	0/20 (0.0)	0/20 (0.0)
ACA	251/2821 (8.9)	2036/2821 (72.2)	1873/2821 (66.4)	73/275 (26.5)	63/275 (22.9)
SCC	63/1886 (3.3)	1417/1886 (75.1)	1218/1886 (64.6)	68/189 (36.0)	41/189 (21.7)
HSIL	343/7535 (4.6)	5516/7535 (73.2)	4800/7535 (63.7)	196/763 (25.7)	115/763 (15.1)

Assessment?

Assessment?

HCG's with high N/C ratios

Clean background

Pleomorphic nuclei

Considerations:

HSIL

AIS

Adenocarcinoma NOS

Uterine MMMT

Table I. Clinical and Cytological Features in SurePath™ Cervical Samples in Eight Cases of Uterine MMMT

<i>No.</i>	<i>Age</i>	<i>Clinical features</i>	<i>Cellularity</i>	<i>Epi:Sarc elements</i>	<i>Background</i>	<i>Endocervical involvement</i>	<i>Myometrial infiltration</i>
1	67	Persistent vaginal bleeding	+++	1:2	Atrophic	Not involved	Not involved
2	63	Weight loss, pelvic mass	++	1:0	Atrophic	NA ^a	NA ^a
3	82	H/O breast carcinoma on tamoxifen	+++	3:1	Atrophic	Local recurrence involving cervix	<50%
4	65	Vaginal bleeding for 6 weeks	+++	3:1	Atrophic	Involved	>50%
5	62	Suspicious endometrial polyp with dilated vessels	++	1:0	Estrogenized	Not involved	>50%
6	60	PMB; huge endometrial polyp	++	1:0	Estrogenized	Not involved	<50%
7	65	Polypoid endometrium 6 cm	++	1:0	Atrophic	Cervical tissue not involved but polypoid tumor extends to external os	<50%
8	60	PMB; round mass in cavity	+	1:0	Estrogenized	Not involved	Not involved

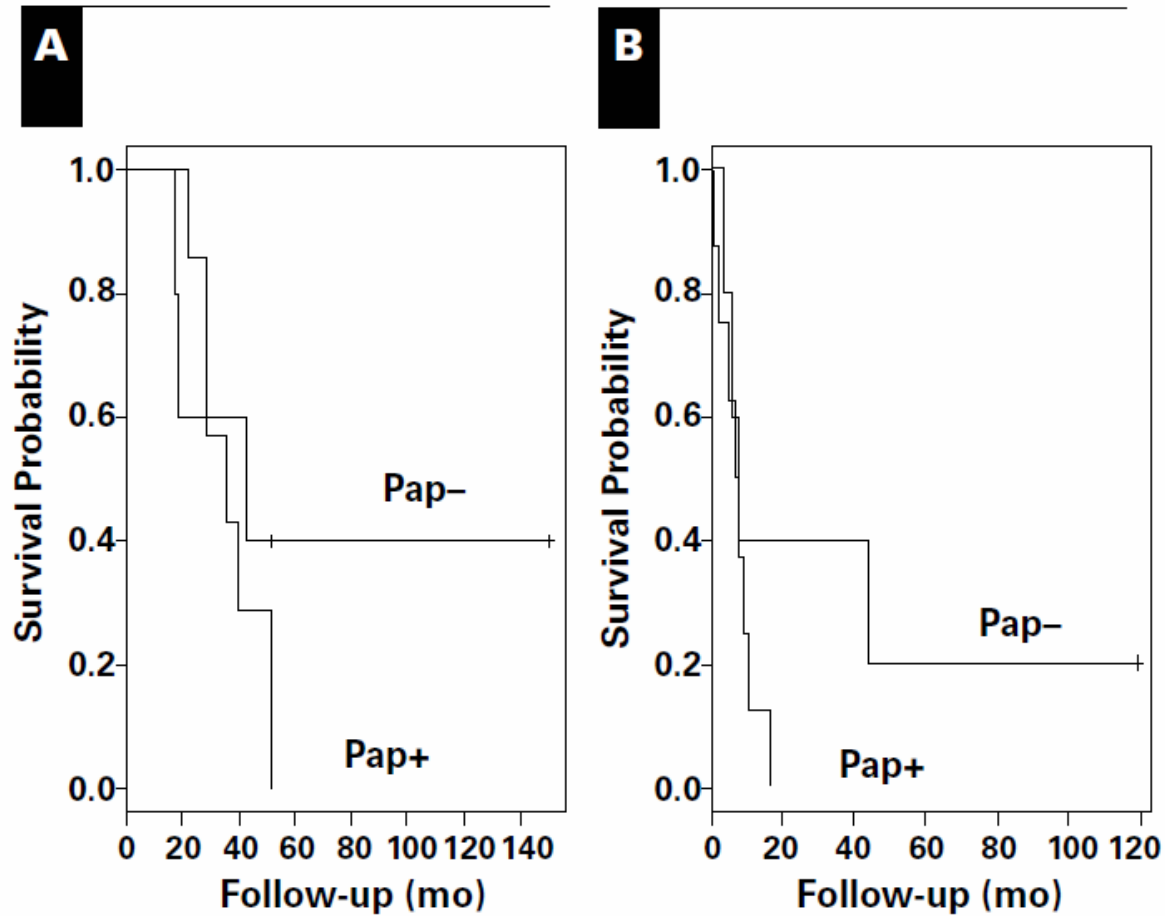

^aPMB, postmenopausal bleeding; NA, not available.

Assessment?

Assessment?

Post-Completion Error

Concomitant Glandular & Squamous Lesions

- Complicating factors:
 - The differential of HCG's includes squamous and glandular lesions
 - Colposcopic sampling may not adequately sample glandular (endocervical) regions
 - Both lesions are positive for HR-HPV
- Possible solutions – Be proactive!
 - Do not become passive regarding AGC
 - Evaluate ECC/bx adequacy for glandular component
 - Re-review Pap tests in select cases
 - Follow up (HPV, Pap test, etc.)

Post-Completion Errors

- All may be present:
 - Infectious organisms
 - Low grade lesion (LSIL)
 - High grade lesion (HSIL) / ASC-H
 - Atypical glandular cells (AGC)
 - Normal / atypical endometrial cells
 - Carcinoma
- When does it happen?
